2. EIA Process & Methodology

Executive Summary

This chapter sets out the broad approach taken to produce the EIA for the Proposed Development. It also includes details of the consultation undertaken.

2.1 Introduction

2.1.1 The EIA process aims to assist The Highland Council (THC) in its determination of the application by identifying where any significant environmental effects are predicted. This assessment has been carried out in consultation with statutory consultees, interested parties and the general public.

2.1.2 The structure of the EIA Report follows the requirements of the Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2017 (as amended) and relevant good practice guidance. The EIA Report comprises a Non-Technical Summary (NTS), the main EIA Report text (this document), accompanying figures and technical appendices.

2.1.3 This chapter is structured as follows:

- overview of the relevant legislation, policy and guidance;
- an outline of the EIA process utilised;
- the scope of the assessment completed;
- details of the assessment of potential effects;
- the consultation undertaken; and
- the assumptions, likely limitations and uncertainty.

2.1.4 This chapter is supported by the following appendices:

- Appendix 2.1 – THC Pre-Application Advice
- Appendix 2.2 – Consultation Record

2.2 Legislation, Policy and Guidelines

2.2.1 A number of legislative and best practice documents have informed the EIA process.

2.2.2 The European Commission Directive 2011/92/EU, amended in 2014 by Directive 2014/52/EU, requires that certain projects, both public and private, must be assessed with regard to their impacts on the environment. This is currently implemented throughout Scotland by the Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2017 ('the EIA Regulations').

2.2.3 The EIA process and structure of the EIA Report follows the criteria listed within the EIA Regulations.

2.2.4 The Proposed Development is considered to fall within Schedule 2 of the EIA Regulations, by nature of it being classed as an 'installation for the harnessing of wind power for energy production (wind farms) which involves more than two turbines with a height exceeding 15 metres'. The criteria for considering whether a Schedule 2 development requires the preparation of an EIA is set out in Schedule 3 of the EIA Regulations. The Applicant has voluntarily accepted that an EIA is required to be undertaken. The information provided within this EIA Report has been prepared in accordance with the Directive and the EIA Regulations.

2.2.5 The regulations and best practice of core relevance to the EIA process and which have been followed in undertaking this assessment are as follows:

- Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2017 (Scottish Government, 2017);
- Scottish Planning Policy (Scottish Government, 2014);
- National Planning Framework 3 (Scottish Government, 2014);
- Planning Advice Note 1/2013: Environmental Impact Assessment (Scottish Government, 2013);
- Planning Circular 1/2017: Environmental Impact Assessment regulations (Scottish Government, 2017);
- Good Practice During Wind Farm Construction 4th Edition (Scottish Government *et al.*, 2019);
- Assessing the Cumulative Impact of Onshore Wind Energy Developments (Scottish Natural Heritage (SNH¹), 2012);
- Siting and Designing Wind Farms in the Landscape Version 3a (SNH, 2017); and
- Environmental Impact Assessment Handbook Version 5 (SNH, 2018).

2.3 Legal Framework for the EIA

Overall EIA Process

2.3.1 In order for the EIA process to be as effective as possible it should be used as an iterative process throughout the design stage, rather than a single assessment performed once the design is finalised. When used as an iterative process, the findings of the EIA can be incorporated within the design of the proposal to provide an optimum design with regard to the Applicant's requirements and the environment.

2.3.2 The findings of the EIA are presented in this EIA Report, which has been prepared in accordance with the EIA Regulations.

2.3.3 The broad approach which has been followed in undertaking the EIA is presented in this chapter and an overview of the methodology adopted for each technical study is provided within the respective technical chapters (Chapters 6 to 14).

Screening & Scoping

2.3.4 Screening is the process by which it is determined whether or not an EIA should be conducted for a proposed development.

2.3.5 As set out within paragraph 2.2.4 the Proposed Development falls within Schedule 2 of the EIA Regulations. Schedule 3 of the EIA Regulations sets out criteria that should be considered in determining whether a Schedule 2 development is likely to have significant environmental effects and hence require a formal EIA.

2.3.6 The Applicant recognised that the Proposed Development would have the potential to have significant environmental effects, and therefore, an EIA would be required. Therefore, rather than undertaking a formal EIA screening process, the Applicant voluntarily elected to undertake an EIA.

¹ The organisation formerly named SNH rebranded in 2020 as NatureScot.

- 2.3.7 The EIA scoping process is undertaken to identify the potentially significant environmental issues which should be considered when assessing the potential effects of the Proposed Development, and an EIA Scoping Opinion may be obtained from the Planning Authority.
- 2.3.8 The Applicant submitted an EIA Scoping Report to Scottish Ministers in December 2010 with relation to the previously proposed twenty-two turbine development. Following consultation with a variety of statutory and non-statutory consultees, Scottish Ministers provided an EIA Scoping Opinion in February 2011.
- 2.3.9 The Applicant subsequently submitted an Environmental Statement (WKN AG, 2011) as part of an application in 2011 to Scottish Ministers under Section 36 of the Electricity Act 1989 for the previously proposed twenty-two turbine development. An addendum to the Environmental Statement was submitted in 2012 to aid the decision process. However, the formal decision on this was received from Scottish Ministers in 2015, denying consent.
- 2.3.10 Consultation with THC has been ongoing since to discuss the Proposed Development, including an initial round of pre-application consultation in 2017, and most recently, submission of a Proposal of Application Notice (PAN) and a pre-application meeting in June 2020.
- 2.3.11 It is considered that the consultation undertaken since 2010, and the formal responses received to the 2011 application provide sufficient basis to not require a further Scoping Opinion to be requested for the Proposed Development. This approach was agreed with THC during the 2020 pre-application process and their pre-application advice is included in Appendix 2.1. Direct consultation has been undertaken with consultees and further details are discussed in Section 2.7 below.
- 2.3.12 The previously proposed twenty-two turbine development was determined by Scottish Ministers' Energy Consents Unit (ECU) as it came under Section 36 of the Electricity Act (1989). The Proposed Development of 9 turbines is up to but no greater than 49.9 MW installed capacity and thus is a Major Planning Application determined by THC.

2.4 The EIA Process

- 2.4.1 EIA process is defined under Regulation 4(1) of the EIA Regulations. In summary, it is the systematic process of compiling, assessing, presenting and mitigating all the significant environmental effects of a proposed development. The assessment is designed to inform the decision-making process by way of setting out the likely environmental profile of a project. Identification of potentially significant adverse environmental effects then leads to the design and incorporation of appropriate mitigation measures into both the design of the scheme and the way in which it is constructed, operated and decommissioned.
- 2.4.2 The main steps in the EIA process for the Proposed Development have been:
- Baseline surveys (where required to update and extend the existing baseline information gathered as part of the 2011 application) to provide information on the existing environmental character of the site and the surrounding area.
 - Consideration of the possible interactions between the Proposed Development and the existing and predicted future site conditions. These interactions or effects are assessed using criteria based on accepted guidance and best practice.
 - Using the outline design parameters for the Proposed Development, prediction of the environmental effects, including direct, indirect, cumulative, short, medium and long-term, permanent and temporary, beneficial and adverse effects.
 - Identification of mitigation measures designed to avoid, reduce or offset adverse effects and enhance beneficial effects.

- Assessment of the significance of any residual effects after mitigation, in relation to the sensitivity of the feature impacted upon and the magnitude of the impact predicted, in line with the methodology identified below.
 - Identification of any uncertainties inherent in the methods used, the predictions made, and the conclusions drawn during the course of the assessment process.
 - Reporting of the results of the EIA in this EIA Report.
- 2.4.3 The EIA process is an iterative process where its findings have informed the design evolution of the project.

Assessment of Effects

- 2.4.4 Throughout the assessment, a distinction has been made between the term ‘impact’ and ‘effect’. The EIA Regulations refer to the requirement to report the significance of ‘effects’. An impact has been defined as the physical change of the characteristics of the receiving environment as a result of the Proposed Development (e.g. noise from turbines), whereas an effect refers to the significance of this impact (e.g. a significant residual noise effect on residential properties). These terms have been adopted throughout this EIA Report to present a consistent approach to the assessment and evaluation of effects and their significance.
- 2.4.5 The exception to this is the Landscape and Visual Impact Assessment which classifies the level of physical and perceptual change to the receiving environment as the "magnitude of change" in line with the recommendations of the Guidelines for Landscape and Visual Impact Assessment third edition (GLVIA3) (Landscape Institute & IEMA, 2013). However, this terminology should be considered interchangeable with "magnitude of impact".
- 2.4.6 Within this EIA Report, the assessment of effects for each environmental topic takes into account the environmental impacts of the construction, operational and decommissioning phases of the Proposed Development and the environmental impacts should the Proposed Development not be consented (the do-nothing scenario).
- 2.4.7 In order to determine whether or not the potential effects of the Proposed Development are likely to be ‘significant’ a number of criteria are used. These significance criteria vary between topics but generally include:
- international, national and local designations or standards;
 - relationship with planning policy;
 - sensitivity of the receiving environment;
 - magnitude of impact;
 - reversibility and duration of the effect; and
 - inter-relationship between effects.
- 2.4.8 Effects that are considered to be significant are identified within the EIA Report. The significance of the resultant effect is informed by professional judgement as to the importance or sensitivity of the affected receptor(s) and the nature and magnitude of the predicted changes. For example, a high magnitude of impact on a low sensitivity receptor will have an effect of lesser significance than the same impact on a high sensitivity receptor. Table 2.1 below is used as a guide to demonstrate the relationship between the sensitivity of the identified receptor and the anticipated magnitude of an impact. Professional judgement is, however, equally important in verifying the suitability of this

guiding 'formula' to the assessment of the significance of each individual effect. Therefore, the table below may change between technical assessments.

Table 2.1 - Guide to the Inter-Relationship between Magnitude of Impact and Sensitivity of Receptor

		Sensitivity of Receptor / Receiving Environment to Change			
		High	Medium	Low	Negligible
Magnitude of Impact	High	Major	Moderate to Major	Minor to Moderate	Negligible
	Medium	Moderate to Major	Moderate	Minor	Negligible
	Low	Minor to Moderate	Minor	Negligible to Minor	Negligible
	Negligible	Negligible	Negligible	Negligible	Negligible

2.4.9 The following terms are used in the EIA Report, unless otherwise stated, to determine the level of effects predicted to occur:

- **major** beneficial or adverse effect – where the Proposed Development would result in a significant improvement (or deterioration) to the existing environment;
- **moderate** beneficial or adverse effect – where the Proposed Development would result in a noticeable improvement (or deterioration) to the existing environment;
- **minor** beneficial or adverse effect – where the Proposed Development would result in a small improvement (or deterioration) to the existing environment; and
- **negligible** – where the Proposed Development would result in no discernible improvement (or deterioration) to the existing environment.

2.4.10 Using professional judgement and with reference to relevant guidance, the majority of the assessments within this EIA Report consider effects of moderate or greater significance to be significant, with those of minor significance or less to be non-significant. If there are deviations from this these will be clearly stated within the individual technical chapters.

2.4.11 Summary tables that outline the predicted effects associated with an environmental issue, the appropriate mitigation measures required to address these effects and subsequent overall residual effects are provided at the end of each technical chapter of the EIA Report and within Chapter 16. Distinction has also been made between direct and indirect, short and long term, permanent and temporary, beneficial and adverse effects where applicable.

Cumulative Effects

2.4.12 Paragraph 5 of Schedule 4 of the EIA Regulations sets out the matters that must be incorporated within EIA Reports. The EIA Regulations state that EIA reports should include an assessment of “*the cumulation of effects with other existing and/or approved developments, taking into account any existing environmental problems relating to areas of particular environmental importance likely to be affected*”.

- 2.4.13 Cumulative effects are those which result from incremental changes caused by past, present or reasonably foreseeable future actions and developments resulting from the introduction of the Proposed Development. These cumulative effects cover the combined effect of individual impacts from the Proposed Development and combined impacts of the Proposed Development with other developments, in accordance with NatureScot’s guidance “Assessing the Cumulative Impact of Onshore Wind Energy Developments” (SNH, 2012).
- 2.4.14 As noted in Appendix 2.2 of this EIA Report, the list of cumulative developments has been agreed with THC. Further discussion on the approach to cumulative assessment is presented in each technical chapter as relevant.

2.5 Scope of the EIA

Technical Scope

- 2.5.1 The technical scope of the assessment will cover all the impacts mentioned in Table 2.2 below, with the following exceptions relating to technical topics which have been scoped out of the EIA.

Health and Safety, Human Health and Population

- 2.5.2 No significant health and safety effects, or effects on human health and population, have been identified with respect to construction and operation of the Proposed Development, which would not be appropriately mitigated through good practice in construction and adherence to relevant legislation and guidance, as noted in Chapter 4 of this EIA Report. Infrastructure including roads and properties have been appropriately buffered and are sufficiently separated from the proposed turbine locations to remove any potential health and safety concerns. Therefore, further assessment of health and safety effects has been scoped out of the EIA.

Air Quality

- 2.5.3 Local air quality during construction (dust and vehicle emissions) will be appropriately controlled through good practice in construction as noted in Chapter 4 of this EIA Report, to be set out in a Construction Environmental Management Plan (CEMP). These effects are therefore not considered likely to be significant and assessment of effects on local air quality during construction has been scoped out of the EIA. No significant atmospheric emissions are likely to arise as a result of the operation of the Proposed Development, and assessment of effects on local air quality during operation has therefore also been scoped out.

Shadow Flicker

- 2.5.4 In consultation with THC, shadow flicker has been scoped out of the assessment due to lack of receptors within the shadow flicker study area. Full details of this are provided in Chapter 14.

Television Reception

- 2.5.5 Since the introduction of digital television signals, effects on television receptors from wind turbines have substantially reduced. Due to the low risk of interference with television reception, and the absence of potential receptors in close proximity to the site, it is not proposed to carry out a detailed assessment of potential effects on television reception and therefore this topic has been scoped out of the assessment.

Major Accidents and Disasters

- 2.5.6 The Proposed Development is not located within an area with a history of natural disasters such as extreme weather events, and the construction and operation of the Proposed Development would be managed within the requirements of all relevant health and safety regulations. It is considered there

is a minimal risk of major accidents and / or disasters occurring as a result of the Proposed Development and this has therefore been scoped out of further assessment within the EIA Report.

Spatial Scope

2.5.7 The spatial scope of the EIA, i.e. the geographical coverage of the assessment undertaken, has taken account of a number of factors, in particular:

- the extent of the Proposed Development, as defined by the Planning Application boundary (refer to Figure 1.1);
- the nature of the baseline environment, sensitive receptors and the likely impacts that could arise; and
- the distance over which predicted effects are likely to remain significant and in particular the existence of pathways which could result in the transfer of effects to a wider geographical area than the extent of proposed physical works.

Temporal Scope

2.5.8 The baseline years used for the assessment of environmental effects vary from 2009 to 2020, as this is the period in which the baseline environmental surveys were undertaken.

2.5.9 For the purposes of the EIA, if the Proposed Development is approved, construction is assumed to commence in 2023 and expected to last for 24 months. The proposed operational life for the Proposed Development is 30 years, after which time it will be decommissioned.

2.5.10 For construction effects, the assessment also takes into account the time of day that works are likely to be undertaken, for example if any night time working is required to minimise disruption to road users.

2.6 EIA Report

2.6.1 Schedule 4 of the EIA Regulations specifies the ‘Information for inclusion in Environmental Impact Assessment Reports’. Table 2.2 below details where the information has been provided within the EIA Report.

Table 2.2 - Information Required in the EIA Report

Required Information (EIA Regulations)	Relevant Reference within this EIA Report
1) A description of the development, including in particular: <ul style="list-style-type: none"> a) a description of the location of the development; b) a description of the physical characteristics of the whole development, including, where relevant, requisite demolition works, and the land-use requirements during the construction and operational phases; c) a description of the main characteristics of the operational phase of the development (in particular any production process), for instance, energy demand and energy used, nature and quantity of the materials and natural resources (including water, land, soil and biodiversity) used; 	The Proposed Development is described in Chapter 4 of the EIA Report, including consideration of anticipated construction methods and the operation of the Proposed Development. Figure 1.2 shows the Proposed Development layout. No demolition works are required. The land use requirements during construction and operation are also described in Chapter 4. Expected residues and emissions are addressed, where relevant, in the appropriate technical chapters of this EIA Report.

Required Information (EIA Regulations)	Relevant Reference within this EIA Report
<p>d) an estimate, by type and quantity, of expected residues and emissions (such as water, air, soil and subsoil pollution, noise, vibration, light, heat, radiation and quantities and types of waste produced during the construction and operation phases.</p>	
<p>2) A description of the reasonable alternatives (for example in terms of development design, technology, location, size and scale) studied by the developer, which are relevant to the proposed project and its specific characteristics, and an indication of the main reasons for selecting the chosen option, including a comparison of the environmental effects.</p>	<p>Chapter 3 of this EIA Report describes the design iteration process including consideration of alternatives, and details how the Proposed Development site was chosen, and the environmental constraints taken into consideration.</p>
<p>3) A description of the relevant aspects of the current state of the environment (the “baseline scenario”) and an outline of the likely evolution thereof without implementation of the development as far as natural changes from the baseline scenario can be assessed with reasonable effort on the basis of the availability of relevant information and scientific knowledge.</p>	<p>A description of the existing baseline environment is provided in each technical chapter.</p> <p>Evolution of the site in absence of the Proposed Development (the “do-nothing scenario”) is addressed in Chapter 3.</p>
<p>4) A description of the factors specified in regulation 4(3) likely to be significantly affected by the development: population, human health, biodiversity (for example fauna and flora), land (for example land take), soil (for example organic matter, erosion, compaction, sealing), water (for example hydromorphological changes, quantity and quality), air, climate (for example greenhouse gas emissions, impacts relevant to adaptation), material assets, cultural heritage, including architectural and archaeological aspects, and landscape.</p>	<p>The receptors potentially affected by the Proposed Development are detailed within each of the technical chapters.</p> <p>Effects on population and human health are assessed in relation to residential amenity, traffic, and noise.</p> <p>Biodiversity is addressed in the ecology and ornithology chapters.</p> <p>Impacts on the water environment are covered in the hydrology, hydrogeology and geology chapter.</p> <p>Material assets are addressed through the assessment of cultural heritage effects and other chapters as appropriate.</p>
<p>5) A description of the likely significant effects of the development on the environment resulting from, inter alia:</p> <p>a) the construction and existence of the development, including, where relevant, demolition works;</p> <p>b) the use of natural resources, in particular land, soil, water and biodiversity, considering as far as possible the sustainable availability of these resources;</p> <p>c) the emission of pollutants, noise, vibration, light, heat and radiation, the creation of nuisances, and the disposal and recovery of waste;</p>	<p>The predicted potential significant effects of the Proposed Development, the measures required to mitigate these, and the significant residual effects, have been reported in each of the technical chapters of the EIA Report. Effects have been predicted in relation to the construction, operation and decommissioning phases of the Proposed Development, including the nature of these effects and their duration.</p> <p>The overall approach and methods used in the assessment of environmental impacts are discussed in Section 2.4 of this EIA Report.</p> <p>Prediction methods are discussed in detail within each relevant technical chapter of the EIA Report.</p>

Required Information (EIA Regulations)	Relevant Reference within this EIA Report
<p>d) the risks to human health, cultural heritage or the environment (for example due to accidents or disasters);</p> <p>e) the cumulation of effects with other existing and/or approved projects, taking into account any existing environmental problems relating to areas of particular environmental importance likely to be affected or the use of natural resources;</p> <p>f) the impact of the project on climate (for example the nature and magnitude of greenhouse gas emissions) and the vulnerability of the project to climate change;</p> <p>g) the technologies and the substances used.</p> <p>The description of the likely significant effects on the factors specified in regulation 4(3) should cover the direct effects and any indirect, secondary, cumulative, transboundary, short-term, medium-term and long-term, permanent and temporary, positive and negative effects of the development. This description should take into account the environmental protection objectives established at Union or Member State level which are relevant to the project including in particular those established under Council Directive 92/43/EEC3 and Directive 2009/147/EC.</p>	
<p>6) A description of the forecasting methods or evidence, used to identify and assess the significant effects on the environment, including details of difficulties (for example technical deficiencies or lack of knowledge) encountered compiling the required information and the main uncertainties involved.</p>	<p>An overview of the methodology of the assessment is provided within this chapter, while the individual technical chapters provide details of each technical assessment.</p>
<p>7) A description of the measures envisaged to avoid, prevent, reduce or, if possible, offset any identified significant adverse effects on the environment and, where appropriate, of any proposed monitoring arrangements (for example the preparation of a post-project analysis). That description should explain the extent to which significant adverse effects on the environment are avoided, prevented, reduced or offset, and should cover both the construction and operational phases.</p>	<p>Specific mitigation measures are reported in each relevant technical section of the EIA Report and in the Schedule of Mitigation presented in Chapter 15.</p>
<p>8) A description of the expected significant adverse effects of the development on the environment deriving from the vulnerability of the development to risks of major accidents and/or disasters which are relevant to the project concerned. Relevant information available and obtained through risk assessments pursuant to legislation of the European Union such as Directive 2012/18/EU of the European</p>	<p>The predicted significant effects of the Proposed Development are reported after relevant mitigation measures have been applied to an identified impact, in each of the technical chapters of the EIA Report</p>

Required Information (EIA Regulations)	Relevant Reference within this EIA Report
Parliament and of the Council or Council Directive 2009/71/Euratom or relevant assessments may be used for this purpose provided that the requirements of this Directive are met. Where appropriate, this description should include measures envisaged to prevent or mitigate the significant adverse effects of such events on the environment and details of the preparedness for and proposed response to such emergencies.	
9) A non-technical summary of the information provided under paragraphs 1 to 8.	An NTS is presented as a standalone document.
10) A reference list detailing the sources used for the descriptions and assessments included in the EIA report.	References are provided at the end of each chapter of the EIA Report.

2.7 Consultation

- 2.7.1 Consultation is a key component of the EIA process and is a legal requirement under the EIA Regulations. In order to inform the EIA, there has been ongoing consultation with statutory consultees, engagement through correspondence and meetings, as required.
- 2.7.2 The organisations who were contacted either directly by the Applicant or by the Planning Authority through the formal EIA Scoping process or the application process for the previously proposed twenty-two turbine development are outlined in the Sallachy Wind Farm Environmental Statement (WKN AG, 2011).
- 2.7.3 As noted in Section 2.3 above, the Applicant also submitted a PAN to THC in June 2020 and following a pre-application meeting with THC and other relevant consultees, received Pre-Application Advice in July 2020 (refer to Appendix 2.1).
- 2.7.4 Appendix 2.2 provides a summary of relevant Scoping Responses and consultation undertaken to date, and where within the EIA Report any matters raised have been addressed.
- 2.7.5 Additional consultation correspondence relevant to the Proposed Development is described as appropriate in each technical chapter of this EIA Report. Consultation with the general public has also been undertaken and detailed below.

Public Consultation

- 2.7.6 A standalone Pre-Application Consultation Report has been prepared which gives details of the correspondence, public exhibitions and other discussions which have taken place with the communities closest to the Proposed Development site. The report also details findings of that work and illustrates the ways in which community engagement has helped identify potential issues arising from the emerging development proposal and, where appropriate, shape the final proposal which is now the subject of this application.
- 2.7.7 The Applicant is grateful to residents and local representatives for their input into the pre-application community engagement process and for their participation in the discussions and consultation events.
- 2.7.8 Community engagement in 2020 has been undertaken in accordance with The Town and Country Planning (Miscellaneous Temporary Modifications) (Coronavirus) (Scotland) Regulations 2020 (Scottish Government, 2020).

2.8 Consideration of Alternatives

- 2.8.1 Schedule 4 of the EIA Regulations requires the consideration of alternatives;
- 2.8.2 *'A description of the reasonable alternatives (for example in terms of development design, technology, location, size and scale) studied by the developer, which are relevant to the proposed project and its specific characteristics, and an indication of the main reasons for selecting the chosen option, including a comparison of the environmental effects'.*
- 2.8.3 The evolution of the site layout and design up to the point of the 2011 application for the previously proposed twenty-two turbine development, and subsequently to arrive at the current Proposed Development, is described in Chapter 3 of this EIA Report.

2.9 Assumptions, Limitations & Uncertainty

- 2.9.1 The EIA process is designed to enable informed decision making based on the best available information about the environmental implications of a proposed development. However, there will always be some uncertainty inherent in the scale and nature of the predicted environmental effects as a result of the level of detailed information available at the time of assessment, the potential for minor alterations to the Proposed Development following completion of the EIA Report and / or the limitations of the prediction processes.
- 2.9.2 A number of assumptions were made during the EIA process and are detailed below:
- The principal land uses adjacent to the site remain unchanged during the course of the Proposed Development's lifetime.
 - Current applications for wind energy projects within approximately 40 km of the site are included within the assessment of cumulative effects for each technical aspect.
 - Information provided by third parties (including publicly available information and databases) is correct at time of submission.
- 2.9.3 Further to this, more specific assumptions may be made with regards to the individual technical aspects and are detailed within each chapter.
- 2.9.4 Whilst baseline conditions have been assumed to be accurate at the time of surveying, due to the dynamic nature of the environment, these conditions may change during site preparation, construction and operation.
- 2.9.5 There is also the potential for a degree of uncertainty as certain aspects of the Proposed Development may be subject to change until a detailed design has been finalised. This uncertainty can come in the forms of:
- turbine selection;
 - foundation and infrastructure design; and
 - micro-siting of the turbines and associated infrastructure which may change due to investigation findings or implementation of mitigation measures.
- 2.9.6 Figures for land take and habitat loss should be considered as approximate and could vary slightly once the detailed design is developed.
- 2.9.7 Information on the construction of the Proposed Development has been developed by the project team based on professional judgement and outline design works, on the most likely methods of construction, plant, access routes and working areas etc. for the purposes of the EIA. The final choice

of optimum construction methods will rest with the Contractors and may differ from those used in this assessment, with any such uncertainty stated in the EIA Report.

2.10 Summary

- 2.10.1 This chapter has detailed the methodology used to conduct the EIA and produce the EIA Report for the Proposed Development. An overview of the relevant legislation and guidance documents has been provided with the main legislative document being the Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2017 (as amended). Following this, the EIA process and the scope of the assessment are detailed. General assumptions, limitations and uncertainties are also stated.
